Remove flag

Let α be a complex number. Use the Euler form of a complex number to solve for α from the expression

$1^{\alpha} = -1$

- ○ $\alpha = \frac{k+1}{n+1}$ for $k, n \in \mathbb{Z}$ with $n \neq 0$
- ○ $\alpha = \frac{k+1}{2n}$ for $k, n \in \mathbb{Z}$ with $n \neq 0$
- ○ None of the given options is correct.
- ○ $\alpha = \frac{2k}{-n+1}$ for $k, n \in \mathbb{Z}$ with $n \neq 1$
- ◉ $\alpha = \frac{2k+1}{2n}$ for $k, n \in \mathbb{Z}$ with $n \neq 0$
