🚩 Flag question

Given the code

```
vector<int> v;
```

```
int elem;
```

to add elem to v, we use the function

`v.push_back(elem);` ⚡

Question **12**

🚩 Flag question

Consider the following function definition:

```
int surprise(int x, int y)
{
    return x + y;
}
```

To turn function surprise into a template function, we need to change it as follows:

Select one:

☐ `template <T>`

```
T surprise(T x, T y)
{
    return x + y;
}
```

☐ `template <class T1, class T2>`

```
T1 surprise(T1 x, T2 y)
{
    return T1 + T2;
}
```

☐ `Template <class T>`

```
T surprise(T x, T y)
{
    return x + y;
}
```

☒ `template <class T>`

```
T surprise(T x, T y)
{
    return x + y;
}
```
